PROFESSIONAL SUMMARY

Software Engineer with three years of experience, starting at the Philippine partner of a Swiss software company, maintaining an Angular and Firebase payroll web app for a Swiss client. Since 2025, customized a fintech vendor's banking platform for 8 of its bank clients, building JavaScript modules on its API.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML, CSS
Frameworks & Libraries: Angular *(production, 2023–2025)*, Bootstrap
Cloud & APIs: REST APIs, JSON, Firebase (Firestore, Authentication, Cloud Functions)
Tools & Practices: Git, Node.js *(scripting and test tooling)*, Mocha, Chai, Postman, Docker *(local development environments)*
AI-Assisted Development: Claude Code, Google Antigravity

PROFESSIONAL EXPERIENCE

Junior Software Engineer | International IT Solutions OPC
June 2025 – Present · Moved with the Pulsar team, which stayed assigned to a Swiss software company

- Customized a vendor's banking customer-engagement platform for 8 of its bank clients, building JavaScript modules and client-specific UI on the platform's API.
- Analyzed bank requirements to separate what the platform supported natively from what needed custom development.
- Triaged production issues across custom modules, platform API responses, and client data, resolving or escalating with reproduction steps.
- Wrote Mocha and Chai test suites in Node.js to verify platform module behavior, covering happy and unhappy paths and regression runs.
- Supported the previous payroll web app alongside the banking work, including fixing a failing production API endpoint by moving filters into Firestore queries instead of loading every record.
- Built a shared AI knowledge base for the team, organizing repos, past deliverables, and reusable Claude Code skills so AI agents could load project context and scaffold new platform modules.

Junior Software Engineer | Pulsar Software Development, Philippine partner of a Swiss software company
October 2023 – May 2025 · From January 2025, also worked on the banking platform project ahead of the transfer

- Maintained and extended an Angular and Firebase payroll web app for a Swiss client, covering profiles, invoicing, and payroll, and localized new UI text into English, German, and French.
- Turned the Swiss client's written feedback, relayed by the senior developer, into fixes and features.
- Regression-tested an incremental upgrade to Angular 16, and fixed a resulting performance regression in UAT using the Angular DevTools profiler and OnPush change detection.
- Built email-change and authenticator-app (TOTP) MFA flows in Firebase Authentication, including re-login prompts and error handling.
- Fixed an authentication bug where an admin changing a user's email updated the admin's own login, by moving the change into a Cloud Function that checks the caller's role.
- Built the main dashboard for a full UI redesign, and refined layouts and components on other pages.

System Analyst (Intern) | Pixel8 Web Solutions & Consultancy Inc., Legazpi
June 2022 – July 2022

- Produced flowcharts, wireframes, and prototypes to support system design and development.

EDUCATION

Bachelor of Science in Computer Engineering
Bicol University – Polangui Campus | August 2019 – July 2023 | GWA: 1.744, Cum Laude

- Thesis: IoT-Based Thermoelectric Cooler for Breastmilk Preservation with Temperature Control and Monitoring.

ACHIEVEMENTS

- 3rd Place, 18th Bicol University Student Research and Development Forum (2023).
- C++ Programming: Champion, ICpEP.se-BU CpE-Lympics (2022); 2nd Runner-up, 2022 Region 5 CpE Challenge.
