PROFESSIONAL SUMMARY

Software Engineer with nearly three years of experience building banking and payroll applications for clients across APAC and Europe. Customizes a banking platform through its API to meet each bank's requirements, with prior production work in Angular and Firebase (Firestore, Authentication, Cloud Functions). Uses Claude Code daily for debugging, testing, and codebase exploration.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML, CSS

Frameworks & Libraries: Angular (*production, 2023–2025*), Bootstrap

Cloud & Backend: Node.js, REST APIs, JSON, Firebase (Firestore, Authentication, Cloud Functions)

Tools & Practices: Git, Docker (local development environments)

AI-Assisted Development: Claude Code, Google Antigravity

PROFESSIONAL EXPERIENCE

Junior Software Engineer | International IT Solutions OPC

June 2025 – Present · Transferred from Pulsar Software Development as part of a company-wide move to its sister company

- Customized a banking customer-engagement platform for 8 bank clients, building JavaScript modules on its API to meet each bank's business requirements.
- Built client-specific UI modules in vanilla JavaScript, HTML, and CSS that consume platform API data.
- Analyzed each bank's requirements to separate what the platform supported natively from what needed custom development, then built the gaps.
- Wrote Node.js test suites and scripts to verify platform behavior and speed up troubleshooting.
- Used Claude Code and Google Antigravity for debugging, test writing, and codebase exploration, validating all generated code before release.
- Triageed production issues across custom modules, platform API responses, and client data, resolving or escalating with reproduction steps.

Junior Software Engineer | Pulsar Software Development

October 2023 – May 2025

- Maintained and extended an Angular and Firebase payroll web app for a European client, covering profiles, invoicing, and payroll.
- Regression-tested an incremental upgrade to Angular 16, and fixed a resulting performance regression in UAT using the Angular DevTools profiler and OnPush change detection.
- Built an email-change flow with MFA support, tracking pending changes in Firestore until verification.
- Fixed an authentication bug where email changes updated the wrong user's record, implemented as a Cloud Function.
- Built the main dashboard and several page components for a full UI redesign.

System Analyst (Intern) | Pixel8 Web Solutions & Consultancy Inc., Legazpi

June 2022 – July 2022

- Produced flowcharts, wireframes, and prototypes to support system design and development.

EDUCATION

Bachelor of Science in Computer Engineering

Bicol University – Polangui Campus | August 2019 – July 2023 | GWA: 1.744, Cum Laude

- Thesis: IoT-Based Thermoelectric Cooler for Breastmilk Preservation with Temperature Control and Monitoring.

ACHIEVEMENTS

- 3rd Place, 18th Bicol University Student Research and Development Forum (2023).
- 2nd Runner-up, 2022 Region 5 CpE Challenge, C++ Programming.
- Champion, ICpEP.se-BU CpE-Lympics Programming Competition, C++ Programming (2022).
